

EPA must fight against the ancient regime

Yoshiyasu Takefuji

Warren Cornwall wrote an article entitled “Critics see hidden goal in EPA data access rule” (1). The new findings of EPA will fight against the targeted industry. It is very important to use publically available data instead of nonpublic data. It is crucial to convert nonpublic data to public data with critical privacy information eliminated (2). There is no reason to use nonpublic data to disclose the new findings. We have been facing with dilemma between economics (industry) and public health. We don’ t need human sacrifice anymore under any circumstances. A question is raised whether EPA can stand against political powers or not. EPA does not need any compromise while we earn money from industry. We are not sure whether many of us will support EPA or not because of the economics reason. Every one of us should not be selfish. Otherwise, EPA will simply waste our money.
