Covid-19 pandemic forces us to revise ourselves

[Yoshiyasu Takefuji](#), Professor, Keio University

SARS viruses had spread during 2003. As of today, CDC stated that the SARS virus “might” spread more broadly through the air (airborne spread) or by other ways that are not now known (1). There is no medicine for SARS. According to the World Health Organization (WHO), a total of 8,098 people worldwide became sick with SARS during the 2003 outbreak. Of these, 774 died. In the United States, only eight people had laboratory evidence of SARS-CoV infection (1). Without answering the homework given in 2003, we have lived ignoring that fact. This covid-19 pandemic forces us to stay home and gives us a last chance to change our world including policies and regulations, the way of working, the way of thinking, and the way of learning and education. The money-oriented science including publications has slowed the progress of science and technology. We need to revise ourselves from the bottom of our hearts.
